

COMPANY OVERVIEW

Headwall Photonics, Inc. is a Massachusetts-based technology company that focuses on developing spectral imaging solutions for both OEM and end-user customers. The Company was founded in 2003, is privately owned, and has approximately 50 employees.

Headwall's core technology is the production of holographic diffraction gratings. These precise optical components are used to manage (diffract) reflected light across a variety of spectral ranges including UV-VIS through shortwave infrared (SWIR). These all-original master-quality gratings are produced at a dedicated clean-room facility equipped to handle rapid prototypes as well as large production runs for OEM customers. Headwall is a recognized leader in the diffraction gratings industry.

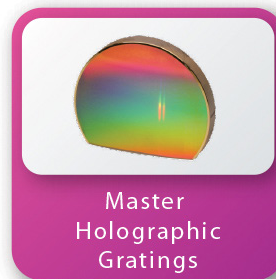

In addition, Headwall also produces spectral modules and OEM spectrometers using these precise gratings to offer customers high spectral and spatial resolution, high signal-to-noise, and low stray light. Customers in the medical/biotech and color measurement industries use Headwall's gratings and spectrometers to achieve these important specifications.

Headwall has rapidly become a leader in producing spectral imaging sensors (both multispectral and hyperspectral) that are small, lightweight, and robust. The diffraction efficiency of Headwall's gratings and spectrometers translates into outstanding imaging sensor performance for a wide range of applications.

Finally, Headwall offers complete integrated solutions that include drones equipped with imaging sensors and other instruments for remote sensing missions such as crop disease detection, mining, environmental monitoring, and more.
